SUMMARY

Full-stack developer, active since 2019 across professional experience and personal projects, with emphasis on PHP/Laravel and React for web, React Native and Flutter for mobile, and Tauri for desktop. Solid knowledge of SQL/NoSQL databases with hands-on experience using tools like Supabase and MongoDB Atlas. Focused on AI-assisted development, applying design patterns such as DDD, TDD, and SDD.

EXPERIENCE

Freelancer | Online Vehicle Inspection Website - AMD Brazil
December 2022 - April 2023

- Replaced in-person vehicle inspections with a remote 20+ step flow in React/Next.js, featuring photo and video capture per step and visual progress tracking.
- Built a custom video capture tool on top of getUserMedia/MediaRecorder after third-party libraries failed on Safari iOS.
- Implemented orientation validation (landscape required) and client-side image compression to meet legacy target system constraints.
- Eliminated the sequential request waterfall on initial load (inspection, configuration, damages, and accessories) by firing all four calls in parallel on mount and manually reimplementing the Suspense pattern to suspend rendering until resolution, avoiding SWR/React Query.

Freelancer | Institutional Website - Shooting Club 76
Out 2020 - Jan 2021

- Designed a custom content management system in Laravel, with a generic schema decoupled from the template, allowing the client to edit image carousels, institutional copy, contact info, and services through an admin panel.
- Implemented image upload with temporary staging and automatic cleanup of orphaned files via a scheduled command.
- Set up hosting, MySQL database, domain, SSL, and a contact form with email delivery (PHPMailer) on Hostgator.

Full-Stack Developer | Zemis Technology
Jun 2020 - Feb 2021

- Contributed to requirements gathering, planning, and task breakdown (group estimation) for an internal-use system, consolidating final adjustments before delivery.
- Integrated the system with Unimed's database to look up affiliated physicians.
- Developed a mobile document-scanning tool in React Native, using a third-party library for automatic field detection.

Junior Developer - Full-Stack Developer | Agência Maior
Out 2019 - Jun 2020

- Sole developer responsible for maintaining the company's legacy PHP websites (no framework) and applications, including bug fixes and frontend adjustments.
- Adapted interfaces for responsiveness on already-published sites, using plain CSS and Bootstrap on web and React Native on mobile.

PROJECTS

SIGA ERP | *Typescript, Tauri, React, SQLite*
Active Development | Aug 2026
Github:github.com/Jonatas-lopess/erp_project

- A simplified ERP management system for small and medium-sized businesses.
- Local-first "Hub and Spokes" architecture similar to the project *ManagerDesk*.

- Full NFC-e (electronic invoice) issuance flow, including tax calculation (ICMS, PIS, COFINS) under the standard regime, DANFE generation and reprinting with QR Code, and integration with each state's verification portals.
- Tamper-resistant license verification mechanism, with digital signature validation and expiration logic isolated at the native layer (Rust).
- System structured into independent business domains (DDD).

EBD App | *Typescript, React SPA + React Native, Supabase + WatermelonDB, Cloudflare*
Active Development | June 2026
Github:github.com/Jonatas-lopess/project-ebd | Demo: EBD App — Sunday School Management

- An application developed for churches to manage their Bible school operations and track the growth of their congregations.
- Multi-tenant architecture with parent/subsidiary hierarchy and cross-tenant integrity triggers — isolation via Postgres RLS.
- Offline-first synchronization on mobile via pull/push and schema version control.
- Provider-agnostic payment webhook pipeline (Stripe or others) with a common interface, HMAC verification, idempotency checks, a status-hierarchy state machine, and atomic transactions.
- Integrated performance monitoring via Sentry.
- Complete CI/CD with lint/type-check, tests and deploy on Cloudflare Workers.

Interactive Fact Sheet | *Typescript, React, Supabase, Cloudflare*
Completed | May 2026 - June 2026
Github:github.com/Jonatas-lopess/ficha_interativa | Demo: Character Sheet — RPG(inactive)

- A personal project for an interactive worksheet for role-playing games (RPG).
- Global state management with Zustand and synchronization with Supabase RxDB.

ManagerDesk | *Typescript, Tauri, React SPA, SQLite*
Completed (v2 planned) | Mar 2026 - Sep 2026
Github:github.com/Jonatas-lopess/office_manager

- A business management application with customer and service control.
- Real-time LAN synchronization using CRDT and Websockets.
- Customized and persistent "Hub and Spokes" networking model, with Hub Discovery, Dynamic Failover, and DB Version Control.

EDUCATION

Bachelor's Degree in Software Engineering
University of Vassouras - Vassouras | *2020 - 2025*

Computer Technician
Pandiá Calógeras Technical School - Volta Redonda | *2017 - 2019*

SKILLS

- **Programming Languages:** PHP/Laravel, JavaScript and TypeScript, React/Next.js and React Native, Rust.
- **SQL/NoSQL Database:** MySQL, SQLite, MongoDB, WatermelonDB, and PostgreSQL.
- **Technologies:** Tauri, MongoDB Atlas, Supabase, Cloudflare, Git/GitHub, Sentry, Firebase, CI/CD, Websockets.
- **Languages:** Portuguese (Native), English (Intermediate B1).
